OBJECTIVE

Seeking a Golang Backend Developer / DevOps Engineer position where I can build scalable backend services and automate CI/CD pipelines, growing toward expertise in cloud-native infrastructure and reliable system operations.

EDUCATION

- Ho Chi Minh City University of Technology and Education (HCMUTE)** 2021 – 2025
B.Sc. in Information Technology Ho Chi Minh City, Vietnam
 - GPA: 3.40/4.00
 - Awarded Academic Excellence Scholarship (x2)

SKILLS

- Programming Languages:** Golang, Java
- Frameworks:** Gin, Fiber v2, Spring Boot, Vue 3
- Databases:** MongoDB, PostgreSQL
- Containerization & Orchestration:** Docker, Kubernetes
- CI/CD & Version Control:** GitLab CI/CD, Jenkins, GitHub Actions, GitHub, GitLab
- Languages & Soft Skills:** Vietnamese (Native), English (IELTS 6.0), Chinese (HSK 3)

EXPERIENCE

- BambuUP** 07/2025 – 03/2026
IT Fresher Ho Chi Minh City, Vietnam
 - Automated data management processes using Airtable, reducing manual tasks and improving work efficiency.
 - Maintained and enhanced a startup's product platform on Azure, implementing new features, debugging and resolving data flow issues, and refactoring code to improve system reliability.
 - Designed and implemented marketing websites using React and Tailwind CSS; purchased a custom domain, configured SSL, and deployed via Vercel to optimize user experience and improve customer conversion rates.
 - Configured LadiFlow integration with Drupal, enabling seamless LadiPage embedding and automated lead syncing to centralize customer data management.
 - Served as a key technical member of the Vietleap AI Accelerator program, providing hands-on technical support to the internal team to ensure smooth and effective program operations.

PROJECTS

- Social Chat App** 2026
Tools: Golang, Fiber v2, Vue 3, Quasar, MongoDB, WebSocket, gRPC, Docker, Redis Personal Project
 - Built a full-stack social networking platform (Go/Fiber backend, Vue 3/Quasar frontend) with JWT auth, posts, likes/comments, and follow relationships.
 - Implemented real-time chat and notification delivery using WebSocket and gRPC; documented the REST API with Swagger and containerized all services with Docker Compose.
- E-Wallet Platform** 2024 – 2025
Tools: Java Spring Boot, PostgreSQL, React, React Native, Expo, Python, Gemini LLM, AWS EC2, GitLab CI/CD, Docker, Jenkins Team Project
 - Developed a cross-platform (web & mobile) e-wallet system integrating an AI chatbot and voice assistant for money transfers and bill payments; backend built with Spring Boot in a layered architecture (Controller, Service, Repository, Entity, DTO).
 - Designed and automated a CI/CD pipeline with GitLab CI to build, push, and deploy Docker containers for repeatable releases.
 - Deployed a 3-node Kubernetes cluster on VMware with centralized monitoring via Rancher, configured NGINX Ingress for traffic routing, and integrated Velero with MinIO for cluster backup and restore.

CERTIFICATES

- Axon Active:** Software Development With Scrum
- DevOpsEdu.vn:** DevOps for Fresher; Kubernetes Course
- Cloud Ace:** Google Cloud Training Day – Core Infrastructure Fundamentals
